

Import to XML from different sources

Iulian Velea

iulian_velea@oxygenxml.com

- Import from text files (CSV, TAB separated values)
- Import from Excel(.xls) files
- Import from a relational Data Base
 - SQL expression result preview
 - Generate schema
- Import from HTML

- Convert DataBase structure to XML Schema
 - ISO-ANSI SQL/XML = flat format
 - Criterion specification
 - Database relationships and constraints (e.g. **primary** and **foreign keys**) converted into W3C schema constraints (**identity constraints, key, keyref**)
 - The way database types are mapped to W3C Schema types is presented through annotations in the resulting schema
 - Hierarchical schema
