What are we missing?
Where would you like to see us go?

@jelovirt and @robander

We all see the world in our own way

Let's talk about how Jarno sees the world.

Let's talk about how Robert sees the world.

Let's talk about what we're missing.

The road Jarno travels

Is often lonely…

…

…
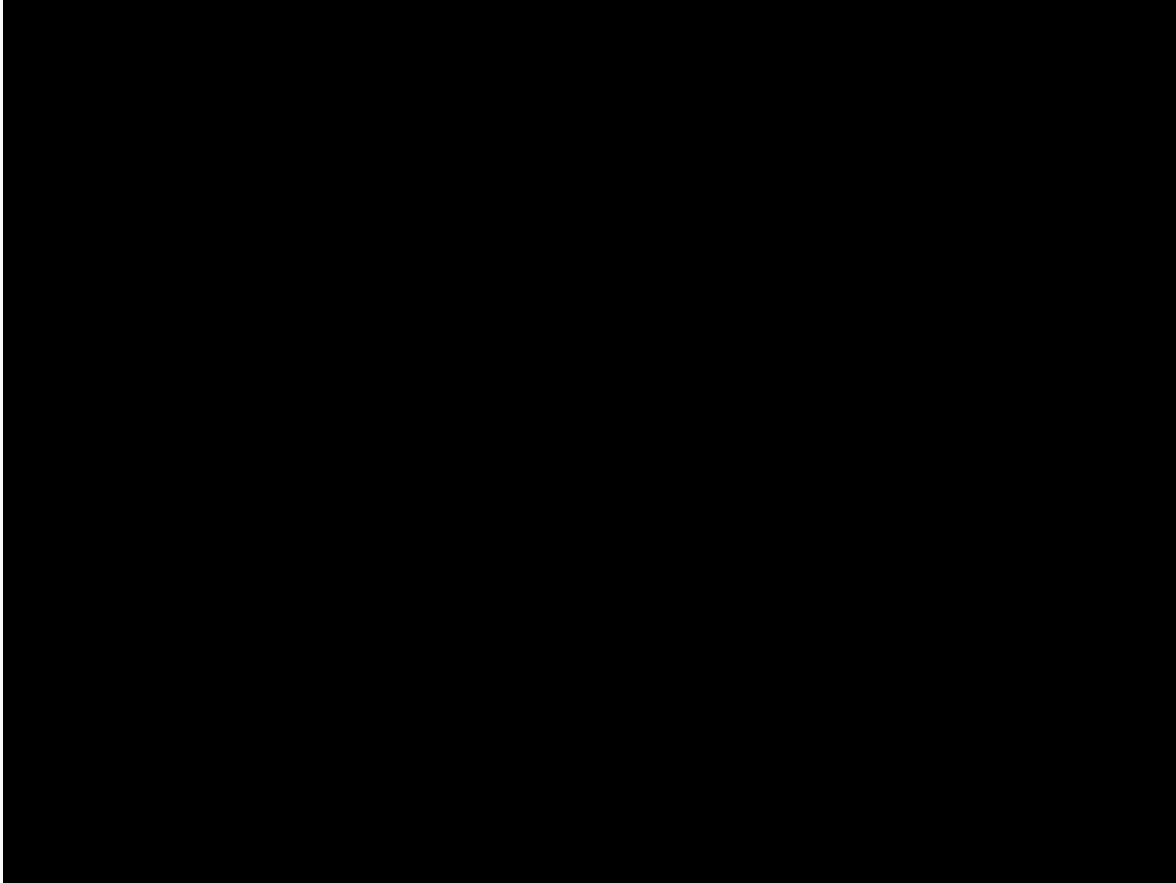

…

… to a degree that …

Product Owner of DITA-OT according to Jarno

The road Robert travels
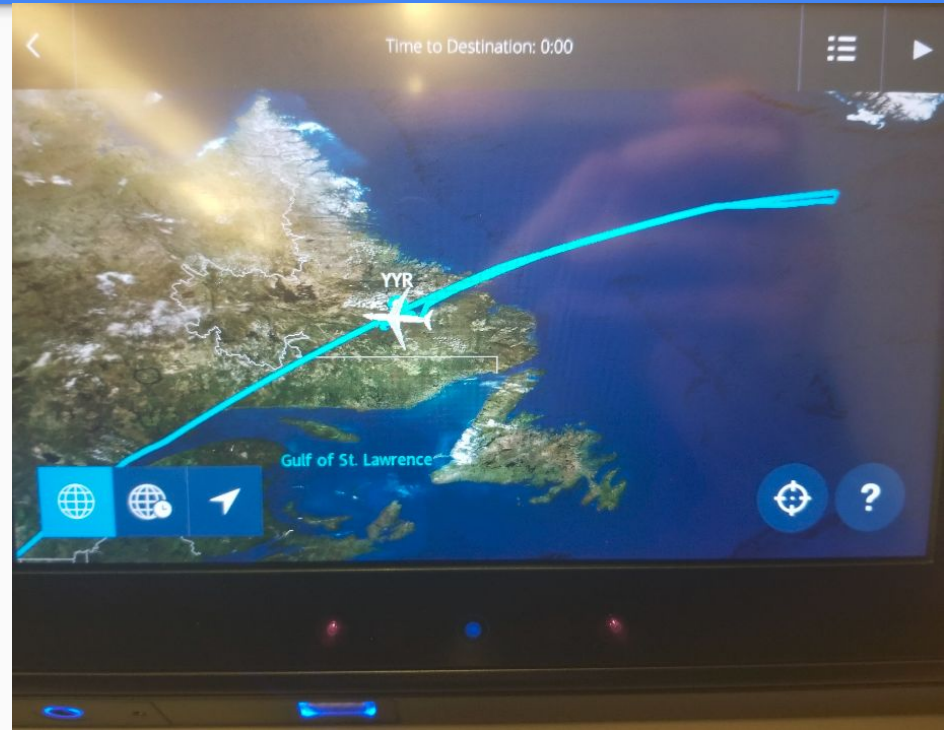

Responsible to IBM, hundreds of IBM authors

15+ years of habits … but not everybody has them

Very different products, often different needs

Common DITA-OT, common(ish) transform types

Extensions go in core or plugins as appropriate

Everybody's on the same road; destinations differ

What does your road look like?

Anybody on Jarno's road?

Anybody on Robert's road?

Tell us about your travels through DITA-OT!

Possible roads

- Custom transforms vs out-of-the-box?
- Custom transforms vs options?
- Bundled in tools vs direct use?
- Build using dita vs build using Ant?
- Local test environments?
- How often do you upgrade?
- On release 1.x, 2.x?
- HTML5, PDF, XHTML, other?

Who, in general, follows the rules?

The road ahead

How do we avoid the bumps?

When we need to do maintenance, where do we put up signs?

How do we get:
- More feedback from you?
- Better feedback from you?
- Better data overall?

We need your feedback

If you don't want your current road to disappear

"This is a super-important quote"

- From an expert

This is the most important takeaway that everyone has to remember.

Thanks!
