# What is the Oxygen Publishing Engine?

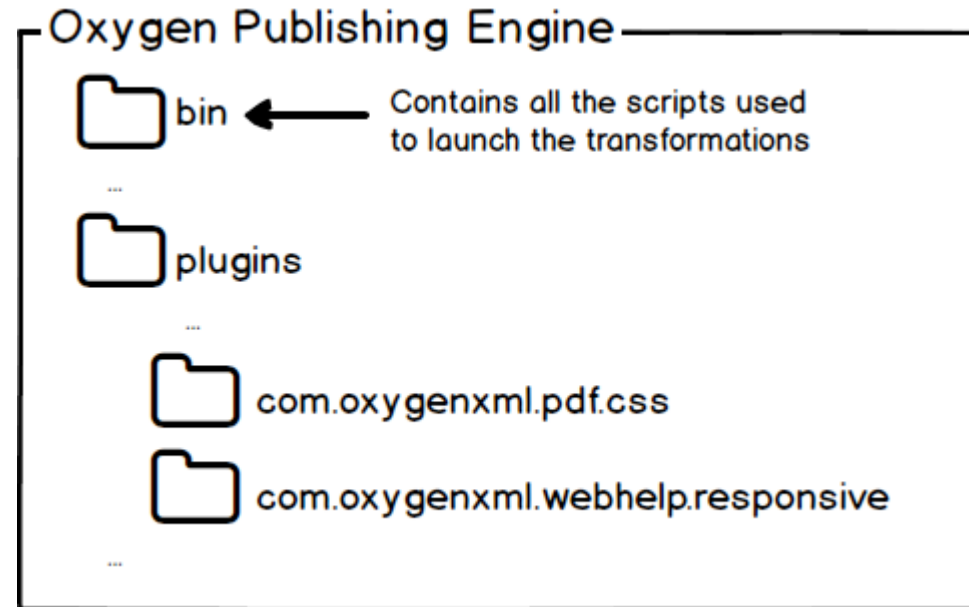

[https://www.oxygenxml.com/publishing\\_engine/download.html](https://www.oxygenxml.com/publishing_engine/download.html)

# What is the DITA Open Toolkit?

- DITA Open Toolkit is the open-source implementation of the DITA standard
- Contains Ant, Apache FOP (PDF), Java, Saxon (XSLT), and Xerces libraries
- Defines a lot of default transformations from DITA to many outputs
- Default outputs can be customized
- New transformations can be added

# Oxygen Publishing Engine Content

- Used as the default DITA-OT in Oxygen
- Uses a specific license key for publishing using command line for both:
  - PDF outputs using CSS & HTML5
  - WebHelp Responsive outputs

# Poll

- How do you intend to use the Oxygen Publishing Engine?
  - Within Oxygen Editor/Author (built-in)
  - With a Continuous Integration Server
  - Other (software integration, etc...)

# Oxygen Publishing Engine and Continuous Integration

- Works on most CI Servers
- Pros:
  - Generates the outputs automatically
- Cons:
  - Cannot use the CSS Debugging

Travis CI

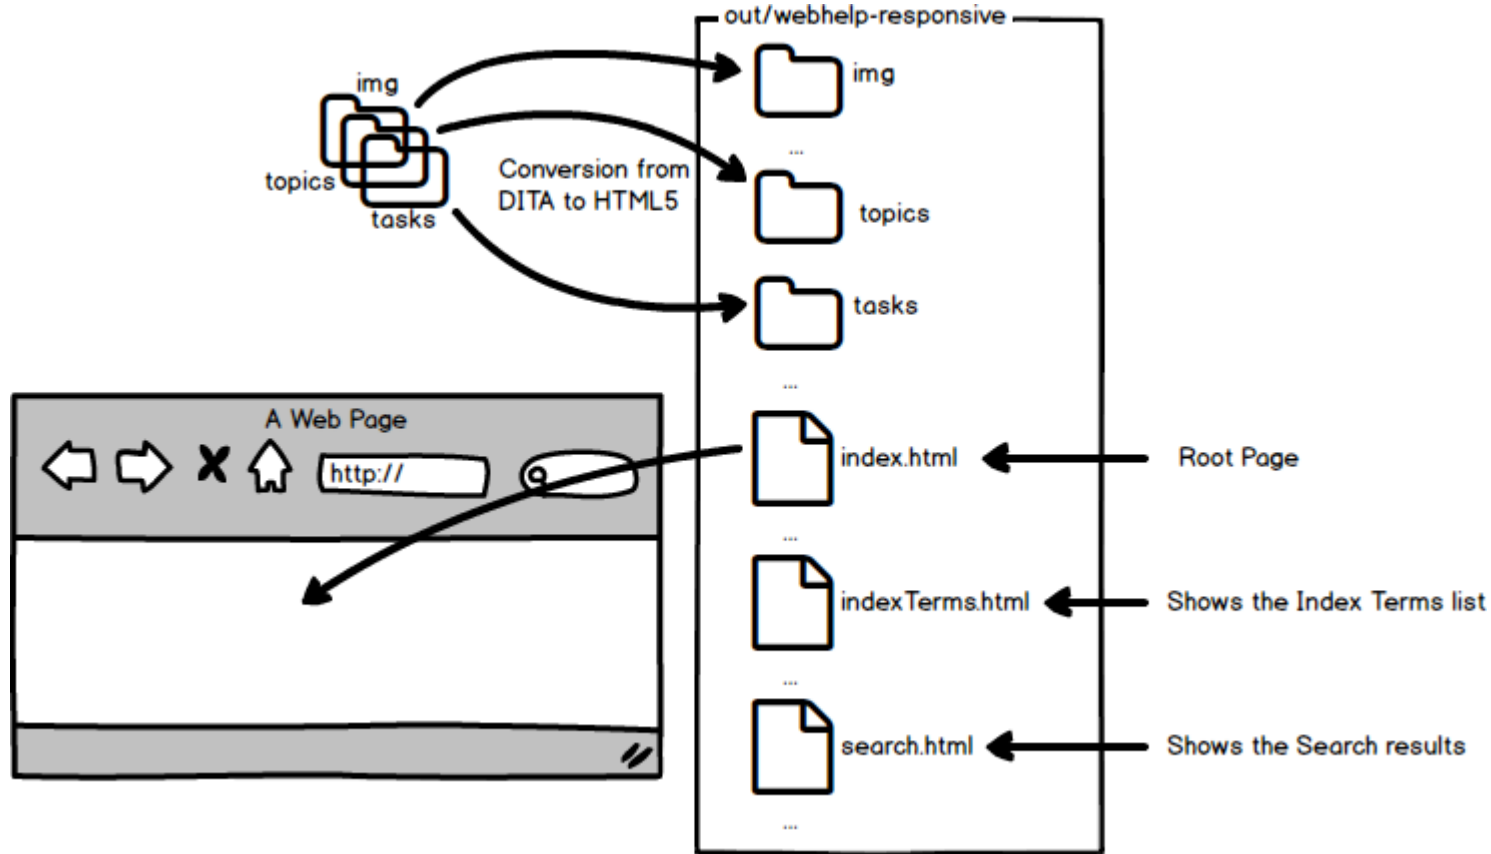

Jenkins

# Poll

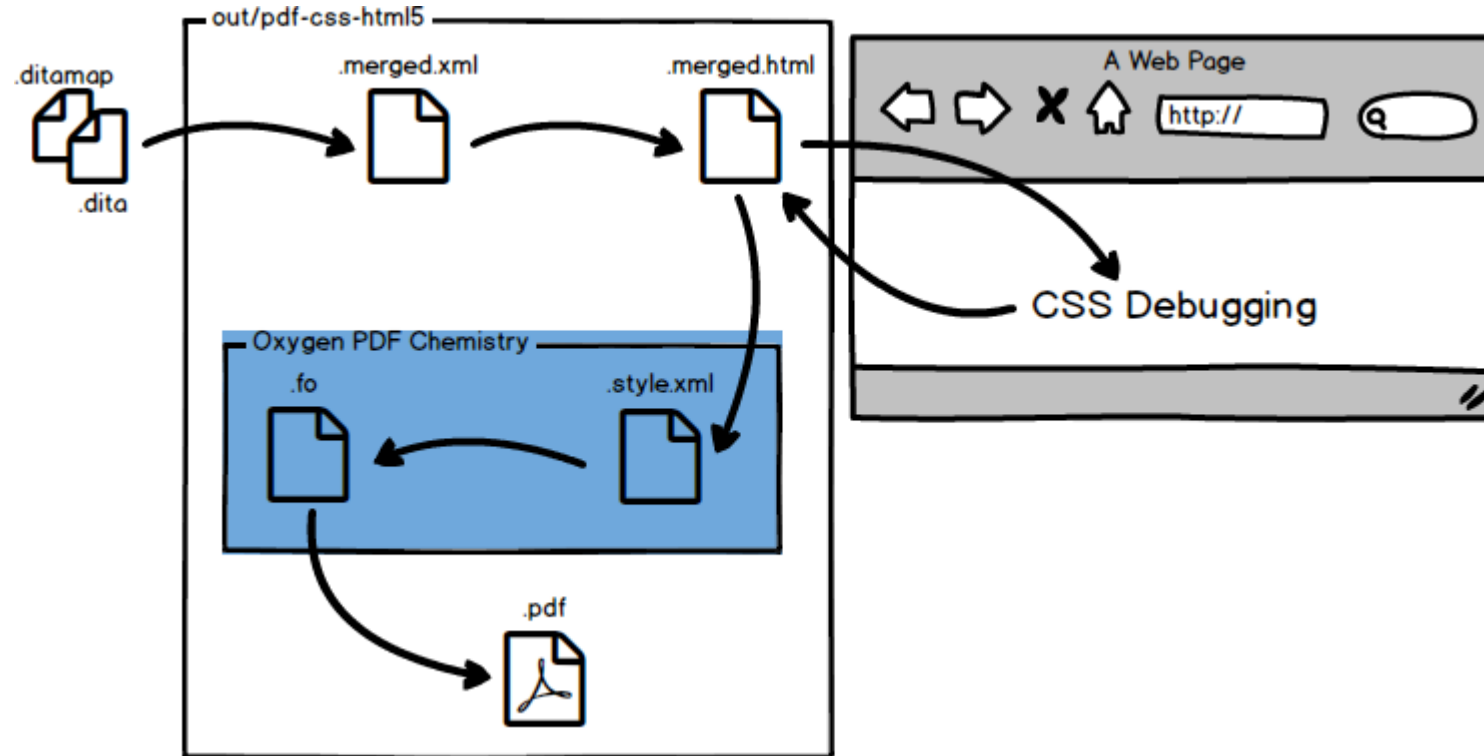

- What Continuous Integration Server are you currently using?
  - Jenkins
  - Travis CI
  - Microsoft Team Foundation Server
  - CircleCI
  - Other (write your answers in the chat box)

# How does the WebHelp Responsive plugin work?

# How does the PDF-CSS & HTML5 plugin work?

# Configuring the Workspace

- Created using Oxygen
- Published on GitHub

 .circleci		Contains automation script for CircleCI
 ope		Oxygen Publishing Engine
 sample		DITA files
 .gitignore		
 README.md		
 deploy.sh		Shell scripts used by CI Servers
 publish.sh		
 space.xpr		

# Configuring the Server

- Define the build machine platform (Windows, Linux, Docker)
- Create the commands and scripts
- Configure the environment (repository credentials, license key, etc.)
- Set the SSH keys for allowing the server to use GitHub

# Defining a Publishing Template

- Go to <https://styles.oxygenxml.com/>
- Select some parameters from the list
- Download the publishing template
- Set the publishing template in the transformation scenario

## Setting up WebHelp with the Oxygen Feedback commenting platform integrated

- Go to <https://feedback.oxygenxml.com/>
- Add a new site configuration
- Select the script generated for output using a command line
- Copy the feedback script and declare the new parameter

# THANK YOU!

**Any questions?**
